Dmitry Kiselev

Senior Software Engineer · Vue 3 / React / Next.js / TypeScript / Node.js

Tbilisi, Georgia (UTC+4) · remote, EU-friendly hours · open to relocation · dkiselew@gmail.com · LinkedIn

PROFILE

Senior fullstack engineer with 15 years of experience building web products at scale — APIs, data, and UI — who knows the difference between “it works” and “it feels great”. I own features end to end: designing REST and GraphQL APIs, shipping test-covered Vue 3 / Nuxt and React / Next.js TypeScript UI, working through UX with designers, reviewing what teammates ship, and catching product UI inconsistencies at a glance. I work across Node.js frameworks, PHP, PostgreSQL, and cloud infrastructure, and I am experienced in CI/CD and production observability for fast, safe deploys, and in building agentic systems. Passionate about Developer Experience and modern dev tooling. I plan my own work, code with AI tools daily, and prototype rapidly to explore ideas.

EXPERIENCE

Product Engineer — Neuromm

2026 – Present

An AI-powered CRM that automates inbound sales for SMBs with autonomous, deal-managing agents.

- Own the product end to end as founding engineer. Designed the backend in full: NestJS (event-driven approach with modules), TypeScript REST APIs, Supabase (PostgreSQL), WebSockets, observability, and cloud deployment.
- Build the product UI in React and TypeScript with Tailwind and a design system, prototyping with MagicPatterns and Cursor.
- Designed a universal agent: one engine runs each tenant's workflow, from end-to-end sales to a single step such as email classification or a draft for the manager.

Senior Software Engineer — Upwork

2014 – 2026

Full-time remote employee of Upwork Inc. on the core engineering team, enhancing the tech stack and delivering product features for the Upwork marketplace (upwork.com, tens of millions of visits per month). Infrastructure team (2014–2018), then Product team (2018–2026).

- **Shipped Vue 3 / Nuxt and React / Next.js microfrontends, backed by Node.js / GraphQL / REST microservices,** for some of the site's most-visited upwork.com pages: Freelancer Profile, Freelancer Search, and Proposals Management.
- **Launched various product features as a product engineer** — from planning to release, with PMs, designers, and QA. Delivered through cross-team collaboration, design docs, tech specs, tests (Cypress, Jest), CI/CD, and gradual rollout experiments with Statsig. Examples: **AI Interview** (a custom video player with AI-generated summaries for async review), Search Page redesign, Profile Portfolio.
- Served on-call and monitored specific upwork.com pages in production with Prometheus and Grafana.
- Helped drive two company-wide migrations of Upwork's frontend core — first to Vue 3, later to React / Next.js and GraphQL — infrastructure efforts spanning all product teams, improving engineering DX.
- **Design System:** Co-built Upwork's shared UI component library, implementing both Vue 3 and React components in close daily work with the design team (Figma, Storybook).
- **Infrastructure team:** Designed PHP BFF REST APIs and microfrontends infrastructure for all upwork.com pages as a PHP/AngularJS fullstack engineer; moved to Product when the company standardized on Vue.

PHP Fullstack Developer — Veeam

2011 – 2014

One of the world's leaders in data backup and protection. Worked in the marketing department on all of the company's websites. Projects I led:

- **Veeam ID:** Proposed and built an in-house OAuth2 SSO service used across internal frontend apps — shared auth, not a one-off login screen.
- **Veeam API:** Designed the data model and REST API for a headless internal CMS (Bootstrap + Zend Framework admin), consumed by marketing web apps. Worked with PMs and stakeholders on requirements and delivery.
- **Veeam Careers:** Built a Zend Framework–based HR website.

PERSONAL PROJECTS

OneLinePlayer — onelineplayer.com

Embeddable open-source web video/audio player that needs no installation. Concept, UI, code (vanilla JS), and cloud deploy (Cloudflare) — all mine.

Wineradar — app.wineradar.ru

Mobile app that uses geolocation to find wines and track their prices, with vector search, AI wine suggestions, and a bottle-label scanner. Covers 1,000+ shops and 10,000+ wines. Solo fullstack: Node + Postgres backend, Capacitor app for iOS and Android, and landing pages.

SKILLS

Frontend	Vue 3, Nuxt, React, Next.js, TypeScript, GraphQL, Tailwind / modern CSS, adaptive markup, Capacitor
Backend & Cloud	Node.js, NestJS, REST APIs, PHP, PostgreSQL, TypeORM, Firebase, Supabase, AWS, Cloudflare, Yandex Cloud, Docker, Prometheus, Grafana, Swagger, OpenAI Agents SDK
Quality & Design	Git, Cypress, Playwright, Jest, Statsig, Figma, Storybook
AI-assisted development	Cursor, Linear, Claude Code, Figma MCP, MagicPatterns. Used daily for planning, UI prototyping, implementation, bug analysis, and spec-driven development.

EDUCATION

Saint Petersburg State University of Information Technologies (ITMO)
BSc, Computer Science
